

AJI Specialty Fertilizers

I had been struggling with dead spots on the greens and the GreenNcrease helped them heal up very well. We had better color on the greens than we have had in the past and I got very positive comments that my greens were the best that some of the golfers has played on this year. Ball marks seemed to heal faster. I will definitely use GreenNcrease next year!

“golfers said my greens were the best they had played on”

I noticed the GreenNcrease improved the uniformity of the greens. Other than a spring and fall granular fertilization, GreenNcrease was my only greens fertility and there was no flush of growth all season long. Ball marks recovered very well and I received many golfer comments about the quality of my greens. GreenNcrease will be in my program next year.

If you would like more information on GreenNcrease or like to find a distributor near you, please call 563-260-1838.

Great things Turf Managers are saying about...

GreenNcrease

AJINOMOTO Specialty Fertilizers

The GreenNcrease gave me very consistent greens even when cutting my fertility in half. The poa annua on the collars came through the brutal drought in great shape. The golfers gave us compliments on the quality of the greens all season long. Our root structure was very strong throughout the season with no thinning in the valleys of our undulating greens.

“more consistent greens with strong roots”

Nick Leach
Kalona Country Club
KALONA, IOWA

I used GreenNcrease for the first time this year during a severe drought. I was amazed by how the greens kept a lush green color and the poa didn't burn out. Also, before using GreenNcrease I would only do a clean-up lap on greens 2 to 3 times per week due to developing a wear pattern. Now I can confidently do it every other day.

“poa annua didn't stress”

AJI Specialty Fertilizers

“the greens looked better the hotter it got”

I have experienced puffiness in the past and this year in 2012 we had virtually no puffiness on our greens. GreenNcrease seemed to help the greens look better the hotter it became with absolutely no wilt. The greens were actively growing through the 100° days. I plan to have GreenNcrease in my spray schedule next year.

I began using GreenNcrease in 2012 and put it in my regular spray program. I tank mixed it with my typical fungicides and noticed the poa annua held color very well and did not check out in the extreme heat we had this year. Also, the greens were wearing around cups much better with no footprinting. I plan to use GreenNcrease next year.

“greens wearing very well around the cups.”
