Organocide™ is effective on a wide variety of insects, mites, armored and soft scales and certain fungal diseases.

Target Pests: Organocide™ is insecticidal to the eggs, larvae, and nymphs of insects and adults of soft bodied insects. Controls a wide range of mite and insect pests such as (but not limited to) aphids, chinch bugs, citrus rust mites, flea larvae, hemlock wooly adelgid, leaf-rollers, mealy bugs, scales (armored and soft), spider mites, thrips and white-flies. Organocide™ controls certain fungal diseases such as (but not limited to) powdery mildew, black spot on roses, helminthosporium and greasy spot on citrus.

Target Plants: Vegetables, fruits, nuts, vine crops, herbs, spices, ornamentals, greenhouse crops, turfgrass landscape plants, interior plants and plantscapes, bulbs, flowers and field crops.

Plant Compatibility: Organocide™ has an unusually high degree of safety to most plants. However, some plants in the Euphorbia (Crown of Thorns) and Brassica families (collard, cauliflower, turnip, Brussels sprouts) have shown some sensitivity. Hibiscus may drop blooms when sprayed and certain tomato varieties may be sensitive if overapplied. If in doubt, test first on a small area of foliage to determine plant safety.

Caution: Organocide™ may stain concrete.

Store in a dry area. Recycle or discard empty container in trash.

Directions for Use (Not recommended for indoor use)

Dosage Rates: Dilute 2 oz. of Organocide™ per gallon of water. Keep agitated. If other pesticides are to be added, do so after Organocide™ has been thoroughly mixed. Use a sprayer that will put out a fine spray.

For Scale Insects, make three or more applications one week apart. Spray the trunk as well as the top and bottom of the foliage. Complete coverage is necessary. Once under control make a preventive application 1 to 2 times per month. Although dead, the scale will retain its color and appear to be alive. When dead, there will be an absence of insects in the "crawler" stage. **For use on lawns to control flea larvae and chinch bugs,** apply at a rate of 4 oz. per 1,000 square feet of lawn and water in after application.

Dosis: Si van a usarse otros pesticidas, deben agregarse despues de que Organocide™ a sido mezzclado completamente. Utilise 2 onzas por galon de agua. Utilise un aspersor que aplique gotas pequenas. Para el control de Insectos de Escama, hacer tres o mas aplicaciones con una semana de intervalo. Asperjar desde la base del tallo y cubrir bien ambas caras del follaje. Es necesario lograr una cobertura completa. Una vez que se ha controlado la escama deben hacerse aplicaciones preventivas una o dos veces por mes. Aun cuando las escamas hayan muerto, conservan su color dando la impresion de que estan vivas. Cuando han muerto, no habra presencia de insectos mobiles, ("crawlers").
